

Office Expansion

Increased Stockholding and New Production Facility in Melbourne

Until recently we were only renting part of our facility in Dandenong so we had the room to expand without physically moving. Last year we decided to expand the Victorian operation and organised for building work to be carried out during December and January.

The main focus was on increasing the size of the store by adding racking and a mezzanine floor and creating a workshop for assembling cylinders. We then decided that it was time to improve our Counter Sales area by building an office and adding air conditioning.

The racking was supplied and installed by Dexion and was finished within two weeks including a mezzanine floor, stairs handrails and the ceiling framework for the new counter sales office.

Work starts on the racking

Racking Nearly Finished

Next we were painting the new Counter Sales office and organising carpetting .

Coordinating various contractors and trying to get things to happen on the day they are meant to caused some stress but by

Stock in place

New Design

Our ISO 15552 cylinders in sizes 32mm to 125mm bore are changing shape. A new profile and endcap design will be introduced during the next few months. The new design takes both the old & new style sensors and uses less aluminium. The new end caps also fit our existing extrusions so you will see

New Counter Sales Office

early January the Counter Sales Office was up and running.

Next came additional stock which had to be found a home in the new racking. After a couple of stock shuffles we have things organised and some of us

know where things are now located.....

Finally the Production Workshop equipment was installed along with barrel & rod material and we were up-and-running.

Things ran very

Raw Materials for Cylinder Production

Workshop Ready for Production

smoothly and despite being busy with orders over Christmas & the New Year the developments caused the minimum of disruption.

If you're in Dandenong why not visit us and see our new operation.

The work involved several outside companies but we should also thank our staff who worked some odd hours painting, moving stock, hanging doors etc.

Our thanks go to, in no special order... Steve, Ken, Tom, Mark, Ken, Colin, George and Peter.

Parts Awaiting Despatch

a gradual change as we move to the new design.

Cylinder life is still the best in the marketplace and by ensuring it will replace existing Metal Work cylinders we aim to make change-over to the new design a painless process.
